

ON THE COVER

DESERT DIAMOND WEST VALLEY CASINO

GLENDALE, ARIZONA

At Rider Levett Bucknall, we aim to create exceptional experiences for our communities. One of the ways we do this is by aligning our capability with client needs. In the case of Tohono O'odham Gaming Enterprise, our team of specialists assisted them by creating, evaluating, and managing project controls that addressed the critical issues of time, cost, scope, and quality of their casino. Our efforts, in conjunction with Summit Project Management, resulted in the successful delivery of a new casino in the heart of the West Valley entertainment and sport district.

Just a short drive from the State Farm Stadium, Desert Diamond Casino (dubbed "Jackpot Valley") brings 1.2 million SF of entertainment space to the west valley. The casino was developed around the core concept of a truly distinct entertainment experience, including over 75,000 SF of gaming space, comprising the latest slots, table games, a poker room, and a bingo hall.

Rider Levett Bucknall - in conjunction with Summit Project Management - provided project management services to the Tohono O'odham Gaming Enterprise. In a unified effort, we demonstrated one of our core strengths: promoting project and team performance through oversight of resource utilization, schedule and risk management, and compliance with health, safety, and building ordinance regulatory requirements. Our team represented the needs of the Gaming Enterprise, ensuring that their goals remained top-of-mind throughout the construction of the casino. RLB and Summit combined their strengths, assembling the best team to see the project through from pre-construction, to construction and turnover.

NORTH AMERICA

While the past year has posed a rocky road for virtually all members of the AEC industries, there are clear—albeit it conditional—signs emerging that indicate there are better times ahead.

At the peak of the pandemic, many development projects were disrupted, with 59% of construction firms reporting to the Associated General Contractors of America they had projects scheduled to start in 2020 but were delayed until 2021, while 44% saw jobs completely canceled.

More recently, between January and June of 2021, that retreat continues, but to a much lesser degree. Only eight percent of firms report that owners canceled projects scheduled to start during that period. Approximately six percent of contractors have seen projects scheduled for the second half of the year postponed, and only two percent report project cancelations.

Taking a look at how specific non-residential building sectors have been affected adds perspective to the story. Again, comparing activity in January-July 2020 to the same period of 2021, work in the hospitality/lodging field declined 30%, both education and office projects dropped 11%, commercial slipped three percent, and healthcare fell by two percent.

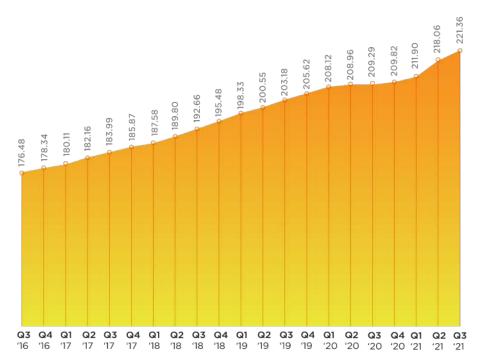

The effect of the depressed business has intensified competition for construction contracts. Because the market is so fierce, we're seeing contractors striving to keep their bids low; in order to do so, they are choosing not to pass along their spiking expenses. The Bureau of Labor Statistics tracks the prices for all manner of building materials and other goods as they ship from the manufacturer, in a report called the Producer Price Index [PPI]. A look at this data exposes the dramatic extent to which contractors are suppressing their costs in their bid price for non-residential work. In July of this year, bid prices averaged 4.4% more than in July 2020, while at the same time, the PPI registered a growth of 25.6%.

Supply chain upheavals, erratic materials tariffs and trade wars, pandemic-induced labor contractions, the continued impact of climate change on the built and natural worlds—these and other events of the past several years have injected periodic uncertainty into the AEC industries. Informed by the sweeping changes in the world, at Rider Levett Bucknall, we stand as trusted advisors, analyzing present conditions and identifying potential opportunities to guide our clients securely into the future.

Julian Anderson FRICS President,
North America

NATIONAL CONSTRUCTION COST INDEX

Welcome to the third quarter 2021 issue of the Rider Levett Bucknall Quarterly Cost Report! This issue contains data current to mid-Q3 2021.

\$1,568.8 Billion According to the U.S. Department of Commerce, construction-put-in-place during July 2021 was estimated at a seasonally adjusted annual rate of \$1,568.8 billion, which is

0.3% above

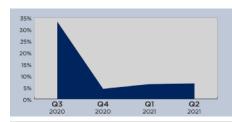

the revised June 2021 estimate of \$1,563.4 billion, and

9.0% above

the July 2020 estimate of \$1,439.6 billion.

The National Construction Cost Index shows the changing cost of construction between July 2016 and July 2021, relative to a base of 100 in April 2001. Index recalibrated as of April 2011.

KEY UNITED STATES STATISTICS

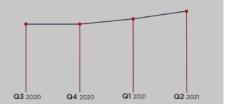

Gross Domestic Product* (GDP)

While still elevated from its average percentage, GDP appears to be recovering from the ranges in Q2 (-31.7%) and Q3 (33.1%) 2020.

Consumer Price Index (CPI)

CPI sees a moderate increase at 271.7 during Q2 (up from 264.9 Q1 2021).

Architectural Billings Index (ABI)

For the second quarter, architecture firms report strong business conditions. Q2's index is among the highest reported in the history of the index.

Construction Unemployment

Construction unemployment continues a downward trend as we passed the mid-year mark for 2021.

National Unemployment

While still elevated compared to pre-COVID rates, national unemployment remains steady, ranging from 5-6%.

GDP represented in percent change from the preceding quarter, seasonally adjusted at annual rates. CPI quarterly figures represent the monthly value at the end of the quarter. Inflation rates represent the total price of inflation from the previous quarter, based on the change in the Consumer Price Index. ABI is derived from a monthly American Institute of Architects survey of architectural firms of their work on the boards, reported at the end of the period. Construction Put-in-Place figures represent total value of construction dollars in billions spent at a seasonally adjusted annual rate taken at the end of each quarter. General Unemployment rates are based on the total population 16 years and older. Construction Unemployment rates represent only the percent of experienced private wage and salary workers in the construction industry 16 years and older, reported at the end of the period. National unemployment rates are seasonally adjusted, reporting the average of the three-month period.

* Adjustments made to GDP based on amended changes from the Bureau of Economic Analysis. Sources: U.S. Bureau of Labor Statistics, Bureau of Economic Analysis, American Institute of Architects.

ABC CONSTRUCTION BACKLOG INDICATOR

The chart on the adjacent page shows the average construction backlog in months, by quarter, as represented by the Associated Builders and Contractors, Inc. Construction Backlog Indicator (CBI).

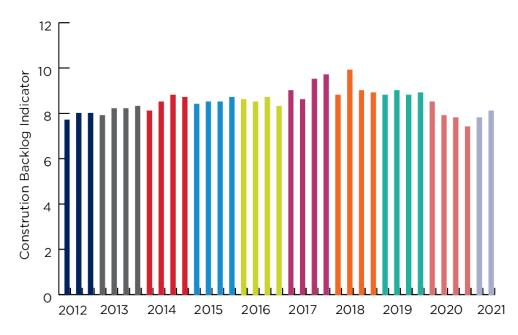

The CBI is a national economic indicator that reflects the amount of work that will be performed by commercial and industrial contractors in the months ahead. This national economic data set offers a level of specificity focused on the U.S. commercial and institutional, industrial and infrastructure construction industries.

The CBI remained relatively consistent during Q2-2021 with only a modest increase, yet is still well below pre-pandemic levels. The ongoing economic recovery is starting to indicate that projects delayed by COVID are slowly getting back on-track for construction. A major hinderance to a sustained construction industry recovery continues to be concern for a shortage in skilled labor, as well as volatile material costs. While some costs have leveled out more recently, they remain elevated from this time last year. Despite these concerns, the demand for construction appears to be on the rise, though it may be at a cost.

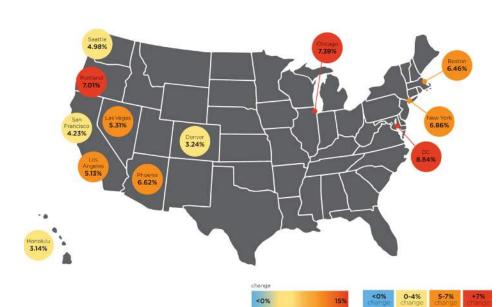

Source: Associated Builders and Contractors, Construction Backlog Indicator

The data in the chart below represents estimates of current building costs in each respective market. Costs may vary as a consequence of factors such as site conditions, climatic conditions, standards of specification, market conditions, etc. Values of U.S. locations represent hard construction costs based on U.S. dollars per square foot of gross floor area, while values of Canadian locations represent hard construction costs based on Canadian dollars per square foot.

Comparative Cost Map and Bar Graph Indicate percentage change between July 2020 to July 2021.

Each quarter we look at the comparative cost of construction in 12 US cities, indexing them to show how costs are changing in each city in particular, and against the costs in the other 11 locations. You will be able to find this information in the graph titled Comparative Cost Index (above) and in the Cost and Change Summary (right).

Our Comparative Cost Index tracks the 'true' bid cost of construction, which includes, in addition to costs of labor and materials, general contractor and sub-contractor overhead costs and fees (profit). The index also includes applicable sales/use taxes that 'standard' construction contracts attract. In a 'boom,' construction costs typically increase more rapidly than the net cost of labor and materials. This happens as the overhead levels and profit margins are increased in response to the increasing demand. Similarly, in a 'bust', construction cost increases are dampened (or may even be reversed) due to reductions in overheads and profit margins.

The following escalation charts track changes in the cost of construction each quarter in many of the cities where RLB offices are located. Each chart illustrates the percentage change per period and the cumulative percentage change throughout the charted timeline.

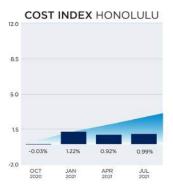

Percentage change per quarter

Cumulative percentage change for the period shown

Our research suggests that between April 1, 2021 and July 1, 2021 the national average increase in construction cost was approximately 1.51% (compared to 0.16%, this time last year). Boston, Los Angeles, Seattle, and Washington, D.C. all experienced increases over the national average in the quarter. Chicago, Denver, Honolulu, Las Vegas, New York, Phoenix, Portland, and San Francisco experienced gains less than the national average.

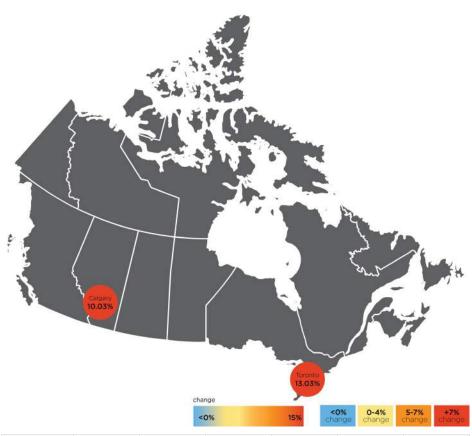

CANADA

COMPARATIVE COST INDEX

City	July 2020	October 2020	January 2021	April 2021	July 2021	Annual % Change
Calgary	19,646	19,985	20,483	21,160	21,617	10.03%
• Toronto	23,873	24,409	25,069	26,050	26,983	13.03%

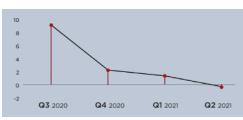

In Calgary, the \$4.9 billion Green Line LRT is the largest infrastructure investment in the city's history. Alberta transportation continues construction of the Southwest Calgary Ring Road and the West Calgary Ring Road. Moreover, ongoing major road construction projects include new roadways, rehabilitation, and upgrades to existing roadways, intersection upgrades, and installation of interchanges.

Construction in Toronto downtown remains busy, experiencing intensive development, with 13 new towers in various phases of development. Construction costs have increased due to demand and supply chain problems while affordable housing has become a primary issue across Ontario. Looking ahead, the Ontario government has announced investment on 38 infrastructure projects at an estimated \$60B.

KEY CANADIAN STATISTICS

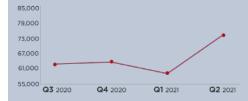

Gross Domestic Product (GDP)

Canada's GDP continues a downward trend after its significant drop in Q4 2020.

Consumer Price Index (CPI)

Canada's CPI grows at a steady - though nominal - pace, indicating a variance of 3.60% from this time last year.

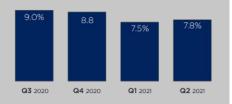

Housing Starts

Housing starts are up 26.12% from the previous quarter. This is reminiscent of a cyclical trend between the first and second quarter of each year.

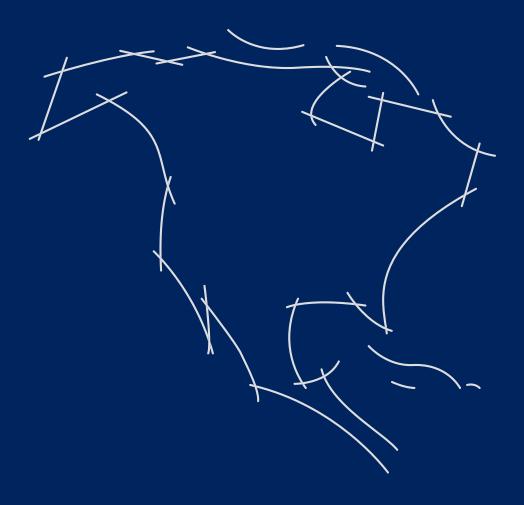

Unemployment

While Canada's unemployment remains stagnant so far this year, it is down 4.5% from this time last year.

GDP represented in percent change from the preceding quarter, seasonally adjusted at annual rates. CPI quarterly figures represent the monthly value at the end of the quarter. Inflation rates represent the total price of inflation from the previous quarter, based on the change in the Consumer Price Index. General Unemployment rates are based on the total population 16 years and older. Construction Unemployment rates represent only the percent of experienced private wage and salary workers in the construction industry 15 years and older. Unemployment rates are seasonally adjusted, reported at the end of the period.
